

Critical Reflection : Week 5 : Task A

At this stage of working on my tasks I got much better at visualising and coming up with code to implement a concept. With that in mind this task implementing a GUI based application to support a generic Graph Data structure became quite simple. I really started to feel the progress I made over the past 4 weeks. After LinkedLists and Trees - I was able to effortlessly go through each function, read the hint and then develop the data structure. As the coding for the task wasn't quite as challenging I spent some time making my Form related code more readable by grouping actions into functions and so on.
